# IDX Workbench

Simplify your DevOps

- Check components in and out of source control, sandboxes, and production
- Visualize version-to-version changes in the desktop app
- Migrate changes and their dependencies between orgs
- See performance profile actions of OmniScript and Integration Procedures
- Visualize Test Procedures executions with a gantt chart

Project Explorer

Organize metadata into collections of industry processes

- Open the side panel from anywhere inside the org
- See an "active project" and its contents
- View the updates to Salesforce metadata that are automatically added to an active project
- Search and navigate to items inside and outside an active project
